not just your technology.*

REFURBISHED TECHNOLOGY

SO WHY SHOULD YOU CONSIDER BUYING REFURBISHED TECH FOR YOUR BUSINESS?

Well, we can't answer that question from your perspective, what we can do is list the reasons why it makes sense to us.

 **Higher Quality:** Refurbished devices often offer better performance and functionality than what you'd find at the same price for a new machine.

 **Save Money:** Refurbished computers can save your business up to a huge percentage off the price of a new machine. The cost savings alone make them an attractive choice.

 **Support for the Circular Economy:** Refurbished technology aligns with the principles of a circular economy. It encourages repairing, reusing, and recycling devices to extend their lifecycle. When you keep devices in circulation longer, you contribute to a healthier planet by conserving resources and reducing waste.

 **Reduced Electronic Waste:** The constant cycle of modern technology generates a staggering amount of electronic waste (e-waste). By opting for refurbished computers, you extend their lifespan and reduce the need for frequent replacements. This directly contributes to less e-waste in landfills.

 **Less Bloatware:** Refurbished machines often have less pre-installed software, resulting in a cleaner operating system.

 **Environmental Benefits:** By opting for refurbished devices, you contribute to sustainability efforts by giving existing hardware a second life and reducing e-waste.

 **Fully Updated:** Refurbished computers are brought back to full functionality, including software and hardware updates. You won't miss out on the latest features or security patches.

 **Energy Savings:** The production and manufacturing of electronic devices require substantial energy. When you buy refurbished, you slow down the replacement cycle, resulting in lower energy consumption. Fewer new devices need to be manufactured, which translates to reduced emissions and energy usage.

 **Minimized Harmful Effects of Production:** Tech production has a considerable environmental impact. By choosing refurbished computers, you lessen the strain on natural resources and decrease the carbon footprint associated with manufacturing new devices.

In summary, buying refurbished hardware isn't just a smart financial choice; it's also a sustainable way to protect our environment.
